Contents

1	Part 1 - Theory	2
1.1	Question 1	2
1.2	Question 2	3
1.3	Question 3	3
2	Part 2 - WSN MAC layer protocol	3
2.1	Question 1	3
2.2	Question 2	3
3	Part 3 - Embedded platform modelling	3
3.1	Question 1	3

1 Part 1 - Theory

1.1 Question 1

We can determine the rate X of actor H by producing a set of simultaneous equations from Table 1 and the provided Synchronous Dataflow model.

The topology matrix for the SDF model is as follows:

$$\Gamma = \begin{bmatrix} 2 & 0 & 0 & 0 & -2 & 0 & 0 & 0 & 0 \\ 0 & 2 & 0 & 0 & -2 & 0 & 0 & 0 & 0 \\ 0 & 0 & 2 & 0 & -2 & 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 2 & -2 & 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & 2 & -6 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & 0 & 1 & 0 & 0 & -1 \\ 0 & 0 & 0 & 0 & 0 & 0 & 3 & -2 & 0 \\ 0 & 0 & 0 & 0 & 0 & 0 & 0 & X & -3 \\ 0 & 0 & 0 & 0 & 0 & 0 & -1 & 0 & 1 \end{bmatrix}$$

This gives us the following simultaneous equations:

$$\begin{aligned} 2A - 2E &= 0 & 2B - 2E &= 0 & 2C - 2E &= 0 & 2D - 2E &= 0 \\ 2E - 6F &= 0 & F - I &= 0 & 3G - 2H &= 0 & XH - 3I &= 0 \\ I - G &= 0 \end{aligned}$$

Using these equations I determined that $X = 2$. Similarly, I determined the firing frequencies of the remaining actors.

$$q = \begin{matrix} A \\ B \\ C \\ D \\ E \\ F \\ G \\ H \\ I \end{matrix} \begin{pmatrix} 6 \\ 6 \\ 6 \\ 6 \\ 6 \\ 2 \\ 2 \\ 3 \\ 2 \end{pmatrix}$$

1.2 Question 2

1.3 Question 3

2 Part 2 - WSN MAC layer protocol

2.1 Question 1

2.2 Question 2

3 Part 3 - Embedded platform modelling

3.1 Question 1
